- 7-plug advanced power strip (included in your kit)

Instructions

1. Plug the advanced power strip into your selected outlet.
2. Plug your devices into the power strip.

a. Master Outlet

Plug in your TV, computer or other primary device. Load-sensing technology will detect the current being drawn through this outlet to activate the switched outlets, 15-18 watts.

b. Switched Outlet

Plug in game consoles, DVD/Blu-ray players, monitors or other peripheral devices. These only become energized when the primary device (in the master outlet) is powered on.

c. Always-On Outlet

Plug in any devices that require power at all times, like a modem or cable box. The power supply of these outlets is not dependent on the master outlet.
