Product Installation Instructions

LED Night Light

To complete installation, you will need:

- LED night light (included in your kit)

Instructions

1. Choose a wall outlet where your LED night light will be of most use. If you can, replace an existing night light which uses a traditional incandescent bulb.
2. If you are replacing an existing night light, begin by removing your old night light. Be careful, if it was in use the bulb in it may still be hot.
3. Recycle your old night light properly. **WARNING: Light bulbs are made of thin glass and can cut you if they break.**
4. Carefully remove your new LED night light from the package.
5. Install your new LED night light by plugging it into the electrical outlet you've chosen. The night light will automatically turn itself on and off depending on the room's light level.
